                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Marek's disease virus; outer membrane protein; fusion protein;
                                                                                                               This sequence represents the chimeric protein 40 K-S which comprises a fragment of the Marek's disease virus outer membrane protein gB fused to an antigenic protein from Mycoplasma gallisepticum. The chimeric protein can be used in recombinant live vaccines for prevention of infection by Mycoplasma gallisepticum, especially as the outer membrane protein shows antigenicity in poultry.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1..672

This sequence represents the chimeric protein 40 K-C which comprises a fragment of the Marek's disease virus outer membrane protein gB fused to an antigenic protein from Mycoplasma gallisepticum. The chimeric protein can be used in recombinant live vaccines for prevention of infection by Mycoplasma gallisepticum, especially as the outer membrane protein shows antigenicity in poultry.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1052

The ORF encodes an antigenic polypeptide (AAR63230). A recombinant avipox virus comprising the coding sequence can be used as a live vaccine to protect against infection by Mycoplasma gallisepticum.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              362
```

```
A restriction fragment of the insert of M.gallisepticum genomic clone pUM-66 containing an open reading frame was sequenced (AAQ77856). The ORF encodes an antigenit polypeptide (AAAR63229). A recombinant avipox virus comprising the coding sequence can be used as a live vaccine to protect against infection by Mycoplasma gallisepticum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   146

A 1300 bp restriction fragment containing the promoter-ORF sequence was excised and was used in the construction of plasmid pNZ7929-R2. This in turn was involved in the construction of a recombinant avigox virus vector comprising the TTW-1 gene, DNA encoding the signal membrane anchor peptide from Newcastle Disease Virus haemagglutinin neuraminidase and FPV sequences. The recombinant avipox virus is useful as a live vaccine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence coding for the 40kDa antigen was obtained by PCR amplification of M.gallisepticum genomic DNA. The antigen reacts with Mycoplasma-immune or Mycoplasma-infected serum and can be used as a vaccine to protect fowl from M.gallisepticum infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            - useful

antigen-antibody reaction with anti-MG poultry sera. It can be used as a vaccine to prevent and diagnose MG infection. Doseage is at least 1 micro gram vaccine / kg. No acute toxicity was noted with a dose of 5 mg / kg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA encoding the protein can be inserted into an expression vector for the prodn. of MG-1 polypeptide which elicits an antigen-antibody reaction with anti-mycoplasma gallisepticum poultry sera. It may also be ligated to other DNA to produce fusion proteins with an N-terminal bacterial enzyme sequence.

This AA sequence of TWG-1 is encoded by TW-1 base sequence. It has the same sequence as that of a polypeptide expressed in Mycoplasma agallisepticum in nature. When the corresponding DNA sequence is inserted into a recombinant vector used to transform a host the antigen protein produced can be used as a vaccine to prevent and diagnose MG infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antigenic proteins of Mycoplasma gallisepticum – useful as poultry

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is the amino acid sequence of a 261 amino acid protein encoded by a fragment of the Mycoplasma gallisepticum genome. The encoding sequence and the sequence of AAT04075 (encoding a 661 amino acid protein) can be used to detect M.gallisepticum using probes based on nucleotides 1125-1648 and primers based on nucleotides 449-466, the complement of bases 893-919, 1908-1934 and the complement of bases 2184-2210 of AAT04075 and a probe based on nucleotides 718-41 of the DNA encoding this protein. The method using these sequences is faster i.e. is able to detect M.gallisepticum, which causes avian chronic respiratory diseases, within one day, from avian secretions, washings from the lung, respiratory tract, nasal cavity, etc.

                                                                                                                                                                                                                                                                                                                                                               A restriction fragment of the insert of M.gallisepticum genomic clone pUM-81 containing an open reading frame was sequenced (AAO/7853). The OFF encodes an antigenic polypeptide (AAR63226). A recombinant avipox virus comprising the coding sequence can be used as a live vaccine to protect against infection by Mycoplasma gallisepticum.

The encoding sequence and the sequence of AAT04076 (encoding a 261 amino acid protein) can be used to detect M.gallisepticum using probes based on nucleotides 1125-1648 and primers based on nucleotides 449-466, the complement of bases 893-919, 1908-1934 and the complement of bases 813-919, 1908-1934 and the complement of bases 2184-2210 of the sequence, and a probe based on nucleotides 718-41 of AAT04076. The method using these sequences is faster i.e. is able to detect M.gallisepticum, which causes avian chronic respiratory diseases, within one day, from avian secretions, washings from the lung, respiratory tract, nasal cavity, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                        Detection; probe; primer; PCR; amplification; secretion; lung; avian chronic respiratory disease; respiratory tract; nasal cavity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Detection of Mycoplasma gallisepticum - for the quick detection, i.e. within one day, of avian chronic respiratory diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      62;

Adhesin pWGA1.2 (AAW11978) and adhesin pWGA1.3 fragment (AAW11979) are products of gene sequences (see also AAT51531) isolated from Mycoplasma gallisepticum. DNA constructs incorporating the promoter and/or signal sequences of the pWGA genes can be used in the prodn. of multivalent live vaccines. The signal peptide sequence is utilised where attachment of an exogenous antigen gene to the mycoplasma cell membrane is required.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2, A Sequence 8, A Sequence 8, A Sequence 6, A Sequence 20, A Sequence 2, A Sequence 4, A Sequence 6, A Sequence 76, A Sequence 36,
